As to the Sire.

Imagine a dry goods box three feet high, three feet long and three feet wide. A box of this sire would hold one cubic yard. It would require 582,222 such boxes to crate up the material now in place in this dam. If these boxes were placed end to end along the Southern Pacific, starting at the Union Depot in El Paso, they would extend 19 miles beyond Tucson, or 221 miles.
